

Background of the subject of the workshop „Energetic Challenges and Challenges of Urban-Development – an approach to a solution in Schleswig-Holstein

Wolfgang Schulz

Ministry of Science, Economic Affairs and Transport, Schleswig-Holstein

19 April 2010 – Seminar Lübeck

Where we are now? – Outlook for the next steps

- **After all Information about the financing instruments in Rakvere/Tallinn and Lübeck we will start to make a scheme for financing different measures in each Target Area (draft). This scheme shall be developed together with your expectation and information for the Target Area.**
- **That will be an innovative approach in the project, starting with a first round in the working groups tomorrow. We want to know which kind of instruments will be interested by you for support developing your Target Area.**
- **As result we produce an overview of possible financing instruments for different Target Areas.**

Introduction in the topic of this seminar

- **But in the beginning we will inform you about further instruments.**
- **Three presentations deal on voluntary instruments for working together between municipality Lübeck and building society support by the land Schleswig-Holstein. The instrument is developed in Lübeck as a pilot project for Schleswig-Holstein.**
- **The other presentation will deal on an further voluntary instruments working under formal regulation (special German law).**
- **The philosophy of both instruments could be transfer to other interested target areas. But we must look for the special national and municipality framework for transfer the instrument. That could be a discussion in the working group session tomorrow.**

Let us start with our Seminar!

**Thank you
for your
attention!**
