The scope of documentation

Initially, Piaseczno's obligation was preparation of technical documentation of refurbishment for 2 selected residential buildings located in the target area. The discussion with facility managers and representatives of home owners associations and with the housing co-operative Jedność, as well as the size of the budget planned for the activity, led the steering committee to take decision on selection of 7 buildings, for which the standardized thermal insulation designs will be elaborated. This has happened during January-April 2011.

The condition of selection of buildings was that the owners would be able to use this technical documentation for refurbishment purposes until September 2012.

The municipality has selected in May 2011, according to the public procurement rules, within the planned budget, the designer, who has prepared until end of July 2011 the technical documentation and cost calculation for 7 selected buildings:

3 owned by home owner's associations: ul. Puławska 21, ul. Szkolna 6, ul. Szkolna 7
4 owned by housing co-operative Jednosc: ul. Szkolna 1, ul. Szkolna 12, ul. Kusocińskiego 3, ul. Kusocińskiego 5

The sample of the technical documentation for the building Kusocińskiego 3 is attached to this report.

The technical documentation demonstrates the innovative approach in following terms:

1. in technical terms - the documentation has been prepared for beneficiaries, who:

- accepted that the U-value of walls after thermal refurbishment will be better than the currently required standards by the Construction Law in Poland (0,25 instead of 0,3 W/m²K)
- will perform the thermal refurbishment of buildings in accordance with the energy audits, elaborated during second milestone of the project (e.g. that not only thermal insulation of the walls will be conducted, but also modernization of heating systems), and this all will bring energy savings higher than 35-40%, while the thermal insulation only will give 20% energy savings maximally
- will use this documentation and the energy audits for thermal refurbishment works, which should finish by the end of 2012

2. in organizational terms - among beneficiaries are 3 buildings of home owners associations and 4 buildings of housing-cooperative Jednosc. While the home owner's associations located in this area started thermal refurbishment during the BEEN project, the housing co-operative, thanks this activity will start thermal refurbishment of own buildings located in the target area (until UrbEnergy project was reluctant), so there is chance that in 2-3 years all 26 buildings in TA will be fully refurbished with energy savings result around 38%. This will finish implementation of the IUDC in the target area in the part related to improvement of technical conditions of living in buildings.

Secondly, in course of preparation for implementation of IUDC, the municipality has prepared the rough cost estimate for 3 following measures identified in the open space in the target area:

1. replacement of old asphalt covers of paths by the new concrete cubes
2. construction of entrance roads from streets to the waste disposal facilities
3. recultivation of green areas, construction of benches and trash cans

The detailed cost estimate is presented in the following table.

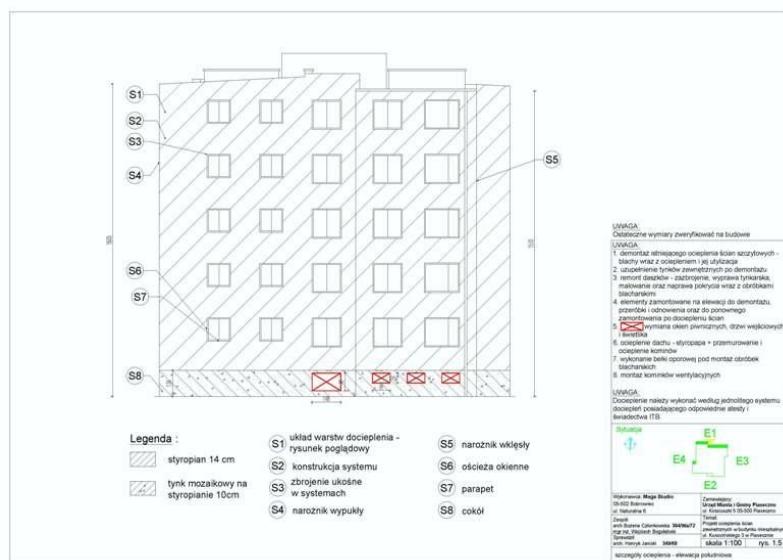

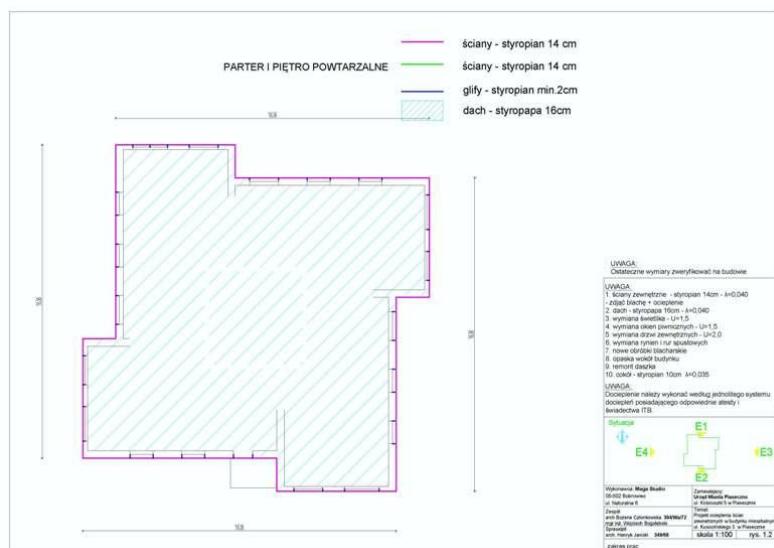

Cost estimate for IUDC implementation for A1MWU area in Piaseczno (open space)

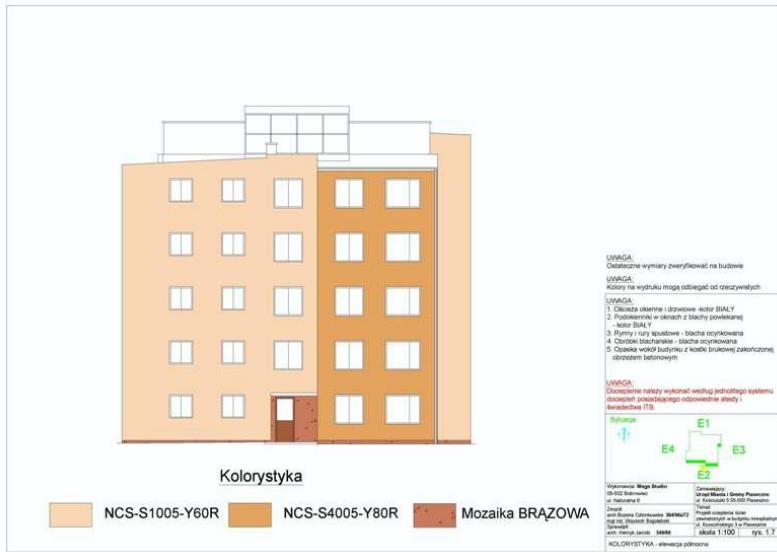

LP	Description	unit	number	price PLZ	value PLZ
1	Mechanical demolition of current asphalt cover	m ²	945	0,40	378,00
2	Construction of entrance roads from streets to the waste disposal facilities thickness 15 cm	m ²	200	10,00	2 000,00
3	Drainage layer gr.10 cm	m ²	200	5,00	1 000,00
4	Sone foundation thickness 20 cm below the street	m ²	200	42,00	8 400,00
5	Cover from beton brick thickness 6 cm on side-walk	m ²	945	45,00	42 525,00
6	Cover from beton brick thickness 8 cm on streets	m ²	200	49,00	9 800,00
7	Concrete brims thickness 6cm	mb	1 260	20,00	25 200,00
8	Placement of curbs 30x15	mb	100	40,00	4 000,00
9	Recultivation of green areas, construction of benches and trash cans	m ²	5000	20,00	100 000,00
10	Waste disposal facilities	szt	8	24 600,00	196 800,00
Total				390 103,00	
VAT tax				21 459,69	
Sum				479 826,69	
1 euro=4,4,PLZ				euro	109 051,52

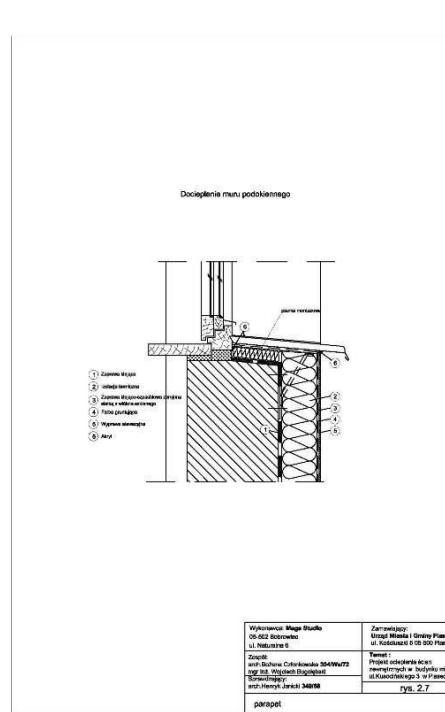

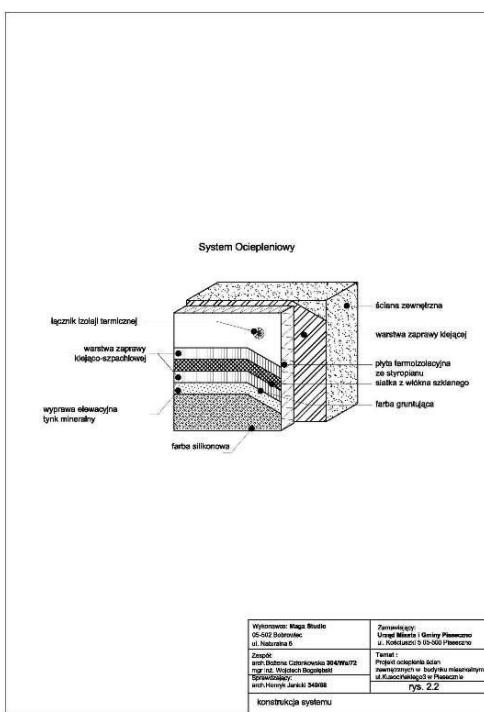

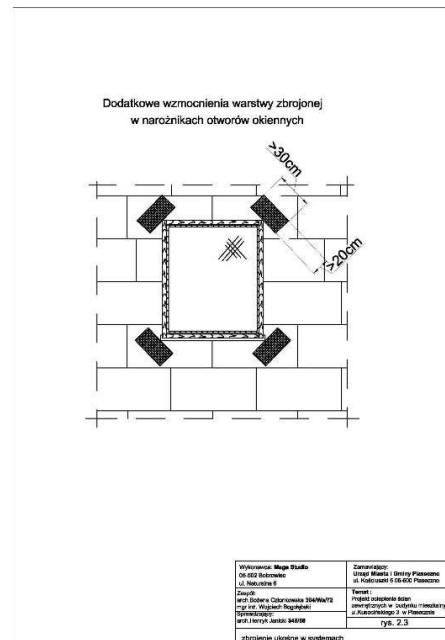

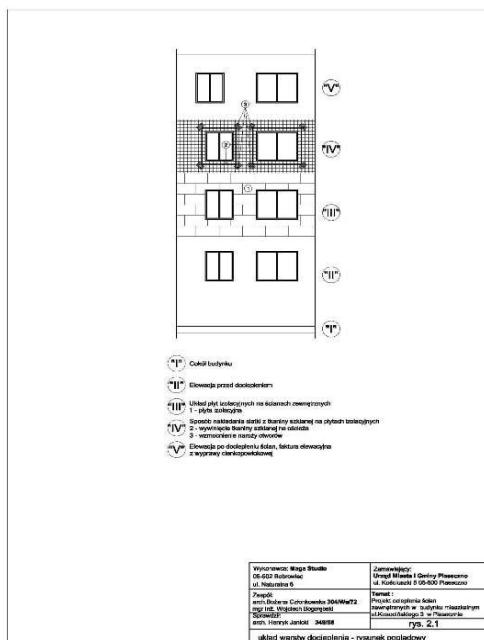

This estimate has been prepared by the city council's officers, who checked the plans of the neighborhood, have done inventory, reviewed available technical solutions, compared the market prices and results of bids for similar projects.

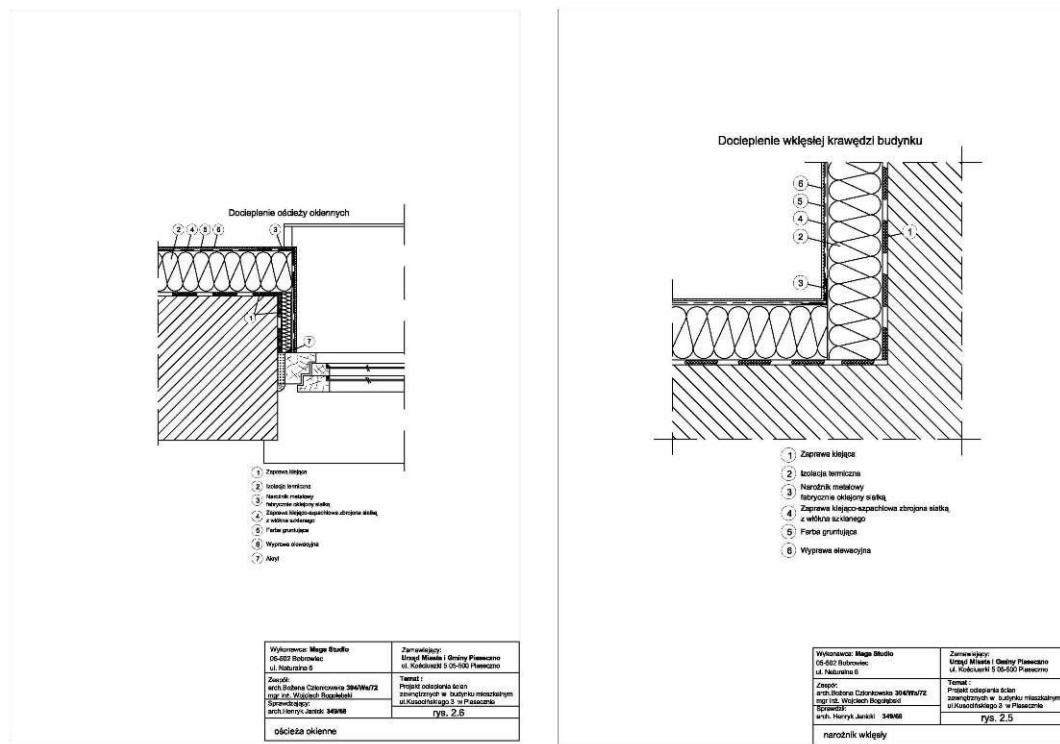

Finally, there was prepared the application to the UrbEnergy Act, which covers most of this measures. The implementation of this measures should be postponed, because of lack of sources in the city budget and lack of positive decision concerning UrbEnergy Act, as well as because of total use of available EU funds for such projects in the current financial perspective under the regional Operational Programme.
